npj Computational Materials is an online only, fully open access journal dedicated to publishing the finest articles on materials by design and integrated computational and experimental materials research. The journal is a partnership between Nature Publishing Group and Shanghai Institute of Ceramics, Chinese Academy of Sciences.

Topics of interest to the journal include, but are not limited to, the following:

- Materials by design: design or discovery of materials (with new chemistry, new atomic/electronic structures, new microstructures/heterostructures, new defect structures, or new or dramatically enhanced properties under external constraints) guided by theory, computation, and data mining
- Experimental synthesis, characterization, and applications of materials by design
- Integrated experimental and computational studies of materials
- Computational and data mining tools for materials by design
- Experimental synthesis and characterization tools for generating materials data
- Materials data generation and data mining
- Significantly new or enhanced understanding of a material through theory and computation

The journal will also publish a professionally written Editorial Summary to accompany each Article, which summarizes the key issues being addressed within the full article.

Published in partnership with

EDITOR-IN-CHIEF
Professor Long-Qing Chen
Distinguished Professor of Materials Science and Engineering, Engineering Science and Mechanics, and Mathematics, Pennsylvania State University

FREQUENCY OF PUBLICATION
Continuous, new content from 2015
